

HARISH B

DevOps Engineer — Cloud & Infrastructure as Code

+91 8778872188 — harishbarani1014@gmail.com — linkedin.com/in/harishbarani1014

Professional Summary

Entry-level DevOps Engineer with hands-on training in CI/CD automation, Linux administration, and AWS cloud infrastructure, built through a structured 8-month internship at Allianz Technology and reinforced by self-directed project work in Docker, Kubernetes, Jenkins, Terraform, and OpenTofu. Delivered a complete containerized CI/CD pipeline for a Java Spring Boot application under a fixed sprint deadline, and independently architected a multi-node virtualized infrastructure environment provisioned entirely through Infrastructure-as-Code. Brings a strong Git/GitHub and Linux fundamentals base combined with a growing specialization in automation and cloud-native tooling. Seeking to apply an automation-first, IaC-driven engineering mindset within a production DevOps team.

Education

Bachelor of Technology – Information Technology

2020–2024

CGPA: 8.02

Core Technical Expertise

Cloud Platforms	– AWS (EC2, IAM, Cloud Provisioning)
Containerization & Orchestration	– Docker, Kubernetes
Infrastructure as Code	– Terraform, OpenTofu, Ansible, Vagrant, cloud-init
CI/CD Tools	– Jenkins
Monitoring & Logging	– AWS CloudWatch, Grafana
Version Control	– Git, GitHub
Operating Systems & Scripting	– Linux Administration, Bash, Shell Scripting
Databases	– MySQL, MongoDB
Programming Languages	– Java, SQL

Professional Experience

DevOps Intern – Allianz Technology

Jan 2025 – Aug 2025

- Completed a structured 8-month training program spanning Java development, Generative AI fundamentals, and core DevOps tooling.
- Gained hands-on proficiency in Git/GitHub workflows including branching, merge conflict resolution and collaborative code review.
- Administered Linux environments and provisioned AWS EC2 instances.
- Self-taught Docker, Jenkins and Kubernetes outside the formal curriculum to complete a mentor-assigned sprint.
- Containerized a Java Spring Boot application using Docker and designed a Jenkins CI/CD pipeline for automated build and deployment.

Projects

Infrastructure Automation & Virtualization Project

<https://github.com/Harishbarani/Infrastructure-Automation-Virtualization-Project>

- Designed and automated a 3-node multi-VM infrastructure using OpenTofu, Vagrant and VirtualBox.
- Implemented cloud-init provisioning to install and configure Nginx automatically.
- Resolved the OpenTofu–Vagrant integration by configuring the correct provider/plugin bridge.
- Published complete configuration files and documentation to GitHub.

Expense Tracker — Spring Boot, JavaScript, Docker, Jenkins, Kubernetes

<https://github.com/Harishbarani/Expense-Tracker>

- Developed a full-stack expense management application using Spring Boot backend and JavaScript frontend.
- Designed REST APIs for expense management and categorization.
- Containerized the application using Docker.
- Automated build and deployment using Jenkins Pipeline.
- Deployed application using Kubernetes Deployment and Service manifests.

Intelligent Security Camera System – Automated Threat Detection

- Developed a Python-based AI surveillance application with modular architecture.
- Designed application modules based on functional requirements.
- Improved detection accuracy and response time through iterative testing.
- Achieved 2nd place at the College-Level Project Expo (2023).

Certifications & Extracurricular

- NSS Volunteer Certificate – NAAC Support
